

Diabetes is currently one of the ten leading causes of death in North Carolina. In 2012, **748,300** people in North Carolina were estimated to have diabetes, and the disease was estimated to affect the health of 7.6 percent of the adult population.¹ Not only does diabetes cause detriment to the well-being of North Carolina citizens, but it also puts a tremendous financial burden on the state.

In 2010, **73,000** non-traumatic lower limb amputations were performed in the US due to diabetes.⁴

The average cost of each amputation is **\$70,434**.⁵

Investing in Podiatric Care

- While diabetes is the leading cause of non-traumatic lower limb amputation, these amputations can be prevented.
- Every \$1 invested in care by a podiatrist results in \$27 to \$51 of savings for the health-care system among patients with commercial insurance. For Medicare-eligible patients, every \$1 invested in care by a podiatrist results in \$9 to \$13 of savings.⁶
- The inclusion of care provided by podiatrists for those with diabetes alone will save the health-care system \$3.5 billion per year.⁷

Today's Podiatrist Keeps North Carolina Walking

North Carolina can benefit economically and medically from encouraging its diabetes patients to visit podiatrists yearly. Research shows yearly visits to a podiatrist by those with diabetes can decrease the risk of lower limb amputation by up to 80 percent.⁸ For more information, visit www.apma.org/diabetes.
